                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1833
                                                                                                                                                                                                                                                                                                                                                                                        Circle, Palo Alto, CA 94303, USA
This CDS clome is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame. Clone distribution: http://bioinfo.clontech.com/orfciones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2 (bases 1 to 1971)

* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Center project name: L3897

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ORGANISM
L Submitted (10-MAR-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk On Mar 11, 2002 this sequence version replaced gi:15944185. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 10), an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11914

Human tumour-associated antigenic target (TAT) cDNA sequence #2904. ADQ86032; ADQ86032 standard; cDNA; 2372 22-JUL-2004. WO2004060270-A2 Homo sapiens. human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss. 07-OCT-2004 (first entry) BP.

ALIGNMENTS

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above

nucleic acid; (2) a host cell comprising the above expression vector; (3)

New nucleic acid molecule and encoded polypeptide, f preventing or treating cell proliferative disorders

for diagnosing, s such as cancer.

Claim 1; SEQ ID NO 2904; 5504pp; English.

```
cc comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-cc length coding region of the above nucleotide sequences; or (c) a sequence cc chaving at least 80% identical to (a) or (b); (5) a chimeric polypeptide; (6) can isolated antibody that binds to the above polypeptide; (7) a process cf or producing the antibody; (8) an isolated oligopeptide that binds to the above polypeptide; (7) a process cf binding organic molecule that binds to the above polypeptide; (10) a composition of matter comprising the above (chimeric) polypeptide; (10) a composition of matter comprising the above (chimeric) polypeptide; (10) a composition of matter contained within the container; (12) methods of inhibiting the growth of a cell that expresses the above portein, where the growth of the cell is at least in part dependent upon a growth cells that express the above protein; (13) a method of the respectation of a protein in a sample suspected of containing the presence of a protein in a sample suspected of containing the protein; (14) a method of described above; (15) methods of diagnosing the presence of a tumour in a sample suspected of containing the protein cannot composited with increased expression or activity of the above protein; and (17) a method of diagnosing the presence of a tumour in a sample suspected of containing the protein cannot composited with increased expression or activity of the above contain; and (17) a method of binding an antibody, oligopeptide or composition and methods are useful for diagnosing, gene containing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnosing, gene call proliferative disorder or cancer. The present sequence represents a contain of the composition of the composition of the composition of the composition can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

CC between the Ewing sarcoma protein (EWS) and its nuclear receptor, as well CC as the screening method thereof. Specifically, it refers to determining CC and identifying a hormonal effect brought about by test compounds that CC modulate either the binding of EWS to the nuclear receptor or the ligand-CC nuclear receptors as including osestrogen, progesterone, thyroid hormone, CC vitamin D, and retinoic acid receptors, most preferably they are androgen CC receptors. Accordingly, these modulators may be used in the development CC of pharmaceutical compositions that can diagnose and be used to treat CC diseases associated with receptor dysfunction such as prostatic cancer, CC alopecia, acne, hypogonadism and androgen-resistance syndrome e.g. CC testicular feminisation. This method provides reliable, sensitive, CC simple, inexpensive and rapid assessment of the hormonal effects of these CC test compounds. This polynucleotide sequence is the cDNA encoding the Naman Ewing sarcoma protein of the invention.

Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

Claim 1; SEQ ID NO 1199; 114pp; English.

CGCA), by detecting the level of expression of gene(s) (GS) identified by CDNA chip analysis as given in the specification, and comparing the CC expression level to an expression level in an unactivated GC, where CC differential expression of GS is indicative of GCA. Also included are CC expression of at least one gene in GS; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a CC tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression CC pathogen or sterile inflammatory disease using the gene expression a CC pathogen or sterile inflammatory disease, by detecting the level of cexpression in a sample of the tissue of gene(s) from GS, where the level of expression in a sample of the tissue of sinflammation; (4) treating CC (M5) an inflammator (especially chronic) or in a tissue, an allergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic cresponse in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an confident of the tissue confident of the tissue having inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. M1 invention relates to detecting (M1) granulocyte (GC) activation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
The invention relates to a method of diagnosing (I) the onset or comparession of benign prostatic hyperplasia (BPH), or screening (II) for or identifying an agent that modulates the onset or progression of BPH. Can be the control of the method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate control of the subject that are differentially regulated compared to normal prostate tissue. (I) comprises confidently prostate cells (II) comprises preparing a first gene expression profile of BPH cells or BPH-like cell population, exposing the cells to the cells, preparing a second gene expression profile of the agent exposed cells, and comparing the first and second gene expression profiles. (I) contified in a rissue or cells, by comparing the onset or progression of BPH. (II) is useful for identifying an agent that modulates the onset or progression of BPH. (Cells at issue or cells, by comparing the expression level of genes confident in the tissue or cells to the level of expression of gene in the database, and displaying the expression levels of at least one gene in the database, and displaying the expression levels of the level of prostate cancer. ABK64106-ABK64860 represent human benign prostatic constatic hyperplasia gene sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying drugs for and diagnosing benign prostatic hyperplasia, by detecting expression levels of one or more genes in prostate cells fro patient that are differentially regulated compared to normal prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-JUN-2002

Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in a liver tissue sample.

Claim 1; SEQ ID NO 3772; 298pp; English.

The invention relates to a novel method for diagnosing and detecting the CC progression of liver cancer, hepatocellular carcinoma or metastatic liver cumour in a patient, and differentiating metastatic liver cancer from CC hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ARN93503-ARN97455 in a CC tissue sample. The method of the invention has hepatotropic, and CC tycostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic CC liver carcinoma in a patient. The method is useful for identifying CC expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, CC drug toxicity, drug efficacy and drug metabolism. Note: The sequence data CC obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

```
The invention relates to human tumour-associated antigenic target (TAT) CC polypeptides, and their related nucleic acids. The TAT polypeptides are CC overexpressed in cancer tissues compared to normal tissues, and may thus conversely the invention also relates to nucleic acid and polypeptide serve as effective targets for the diagnosis and treatment of cancer in CC mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and cards and cards; an antibody specific for a TAT polypeptide; apeptide or organic cmolecule which binds to a TAT polypeptide; fusion proteins comprising a CC molecule which binds to a TAT polypeptide; fusion proteins comprising a CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be cused as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The probes 22RR3 and 22RR12 were used to screen a human foetal brain clibrary (Stratagene cat.# 936206). The clone BFIAC5 was identified and sequenced. It represents the entire coding region and 3'-UTR of the Ewgene. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid of EWS gene and its hybrid(s) - contg. gene sequence involved in chromosomal trans-location, also derived mRNA, probes, fusion proteins etc., for diagnosis and treatment of Ewing sarcoma and melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2371 BP; 639 A; 587 C; 659 G; 486 T; 0 U; 0

The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polymuclaotide sequences. The compounds that modulate expression of the polymuclaotide sequences of activity and production, and the cell is also useful for identifying compounds that modulate expression of the polymuclaotide sequences compounds that modulate expression of the polymuclaotide sequences of treating diseases such as hyperproliferative disorders (e.g. cancer), fimune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and confectious disorders (e.g. hepartitis). The polymuclaotide sequences of the invention are also useful in gene therapy. AAS62214-AAS62838 proteins

The invention relates to human tumour-associated antigenic target (TAT) cc polypeptides, and their related nucleic acids. The TAT polypeptides are coverexpressed in cancer tissues compared to normal tissues, and may thus gerve as effective targets for the diagnosis and treatment of cancer in cc mammals. The invention also relates to nucleic acid and polypeptide compared to the TAT nucleic acids and treatment of cancer in cc acid; an antibody specific for a TAT polypeptide; a peptide or organic complexity an antibody specific for a TAT polypeptide; a peptide or organic complexity and methods and compositions for the treatment or cc diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, and compositions for the treatment or cc diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, concreased TAT expression, particularly cancers such as breast cancer, cc colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cc cancer, maclanoma and leukaemia. TAT nucleic acids may further be cused as hybridisation probes, in chromosome and gene mapping, in cc chromosome identification and in gene therapy. The present sequence cc crepresents a TAT nucleic acid of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2004-347921/32.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                which encode human secreted proteins. The cDNA sequences have been compound from a variety of human tissues. The invention also provides a method for producting proteins from these polymucleotide sequences. The proteins are useful for identifying compounds that modulate their cactivity and production, and the cell is also useful for identifying compounds that modulate expression of the polymucleotide sequences (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and infectious disorders (e.g. hapatitis). The polymucleotide sequences of the invention are also useful in gene therapy. AAS62214-AAS62838 crepresent the cDNA sequences of the invention that encode for novel human represent the cDNA sequences of the invention that encode for novel human concerns acceptated expression.

                                                                                                                                                                                 The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABS7374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. ABI9913 and ABI99914 represent primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

```

New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases in which the gene is involved, or as target molecules for gene therapy.

Claim 1; SEQ ID NO 1074; 205pp; English.

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
